Plenary Speakers

Plenary 1: “Molecular Electronics for Chemical/Bio-Sensors”

Time: Aug 5 (Sat), 09:30-10:10

Timothy M. Swager
Massachusetts Institute of Technology, USA

Timothy M. Swager is the John D. MacArthur Professor of Chemistry at the Massachusetts Institute of Technology. He has published more than 500 peer-reviewed papers and more than 120 issued/pending patents. Swager's honors include: Election to the National Academy of Sciences, National Academy of Inventors Fellow, The Pauling Medal, The Lemelson-MIT Award for Invention and Innovation, Election to the American Academy of Arts and Sciences, The American Chemical Society Award for Creative Invention, The American Chemical Society Award in Polymer Chemistry, and The Carl S. Marvel Creative Polymer Chemistry Award (ACS).

Swager's research interests are in design, synthesis, and study of organic-based electronic, sensory, energy harvesting, membrane, high-strength, liquid crystalline, and colloid materials. His liquid crystal designs demonstrated shape complementarity to generate specific interactions between molecules and includes fundamental mechanisms for increasing liquid crystal order by a new mechanism referred to as minimization of free volume. Swager's research in electronic polymers has been mainly directed at the demonstration of new conceptual approaches to the construction of sensory materials. These methods are the basis of the Fido™ explosives detectors (FLIR Systems Inc), which have the highest sensitivity of any explosives sensor. Other areas actively investigated by the Swager group include radicals for dynamic nuclear polarization, applications of nano-carbon materials, organic photovoltaic materials, polymer actuators, separation membranes, and luminescent molecular probes for medical diagnostics. He has founded five companies (DyNuPol, Iptyx, PolyJoule, C₂ Sense and Xibus Systems) and has served on a number of corporate and government boards.
